## RECENT PROJECTS

### WEATHER APP | Solo Project

[GitHub](#) | [Live Site](#)

March 2023

**Developed using:** React, Redux, Node.js, PostgreSQL, Express, Sequelize.

**Description:** When the user searches for a city they can see the detailed current weather and the forecast for the next 7 days. They can save their favorite cities by creating an account.

### WHAT'S FOR DINNER? | Group Project

[GitHub](#) | [Live Site](#)

December 2022

**Developed using:** JavaScript, HTML, CSS, and API's.

**Description:** The user is presented a dish and cooking instructions based on the type of food they searched. They can find a drink pairing by using the random drink generator.

**My Role:** I used JavaScript to make API calls and manipulate the DOM to display recipes. I organized a clean coding style for the project and helped my classmates understand JavaScript logic.
